

Please be advised that 6mm wire glass is not a safety glass for doors or windows

The purpose of the wire glass is for fire protection only.

All wire glass supplied by AGM Glass Fabricators has a 45minute fire rating.

Features

Regarded for its flame-retardant properties, this clear or patterned glass with an integrated metal wire mesh holds the glass in place in case of breakage. Ideal for decorative or architectural applications, this range of four products (diamond or square wire mesh design, clear and obscure (patterned) glass) is available in a thickness of 1/4" (6mm), and in a range of standard sizes. Wired glass may be used as a fire-rated product in limited applications. Wired glass should not be used in applications that require safety glazing.

Benefits

- Fire-rated for 45 minutes with required hose stream test
- Prevents glass fallout when broken
- Withstands thermal shock
- Passes positive pressure UL10C testing standards

Applications

Wired glass may be used in limited applications requiring 45 minute fire-rating, and many times is used for decorative applications. Wired glass should not be used in doors, sidelites or other applications that require safety glazing materials.
